

Deep learning for medical imaging school 2021

Deep learning basics will be taught as well as complementary aspects compared with the last edition. This training event will cover the main aspects of the critical and fast developing area of deep learning for medical image analysis. We will provide the fundamental principles of machine learning, review the most advanced deep architectures and give insight into the most challenging domains with a special focus on deep medical image analysis.

The pre-registration is now opened, all information may be found on the web site: <https://deepimaging2021.sciencesconf.org/>
